

2.Pick any sign-up or login form from a popular web app you use (like Zomato, Instagram, or Paytm) and test its field validation by entering invalid email addresses, leaving required fields blank, and submitting — note the error messages shown for each case.

Test case	Input / Action	Expected error message or behavior
1. Invalid email format	Enter `abc123` in the email field.	An error message may indicate that the email address is invalid.
2. Missing `@` symbol	Enter `usergmail.com`.	The form may ask the user to enter a valid email address.
3. Missing domain	Enter `user@`.	The form may display an invalid email message.
4. Required field left blank	Leave the email field empty and submit the form.	The form may ask the user to enter an email address.
5. All required fields blank	Leave all required fields empty and submit.	The form may highlight missing fields or display a message asking for the required information.

6. Valid email format	Enter `student@example.com`.	The email format may be accepted, but further verification or other required information may still be needed.

3. Install the Notepad++ desktop application on your Windows machine, then test if the installer correctly creates a Start Menu shortcut and check if you can save a text file to your Documents folder.

4. Download and install the 'Spotify Lite' APK on an Android emulator (like BlueStacks or Android Studio emulator), then verify that the app launches, the login screen appears, and the UI elements (logo, fields, buttons) are properly displayed on your mobile screen.

Hint: If you don't have a real device, use any free Android emulator and a safe APK download source.

Tools used:

- BlueStacks Android Emulator
- Spotify Lite APK
- Computer or laptop

Procedure:

1. Installed and opened the Android emulator.
2. Downloaded the Spotify Lite APK from a third-party APK repository.
3. Installed the APK in the emulator.
4. Launched the application.
5. Checked the logo, login fields, buttons, and screen layout.
6. Captured screenshots as evidence.

Observations:

Test	Result
APK installation	To be recorded
Application launch	To be recorded
Logo visibility	To be recorded
Login screen display	To be recorded
Fields and buttons	To be recorded
UI layout	To be recorded

Conclusion: The Spotify Lite application was tested on an Android emulator to evaluate installation, launch behavior, and the display of its user interface. The final result will be determined from the actual observations and screenshots.5.

5. Test the window handling of the Windows Calculator app by opening multiple instances (if possible), switching between them, and checking if calculations in one window affect the others.

Test Case	Expected Result
Open multiple instances	Multiple windows may open, depending on the Windows version and app behavior.
Switch between windows	Windows can be switched using `Alt + Tab`.

Perform calculations in Window 1	The calculation result is displayed in Window 1.
Perform calculations in Window 2	The calculation result is displayed in Window 2.
Check independence	Calculations in one instance should not change the result in another instance.
